

2000

A high-angle, wide shot of a massive crowd of people filling a stadium. The crowd is dense and extends far into the background. Many individuals are wearing blue and yellow clothing, suggesting they are fans of a specific team. The overall atmosphere is one of a large-scale event or game.

JavaScript Automation

JavaScript ⌵

<No selected element> ⌵

```
var TextEdit = Application('TextEdit');

var doc = TextEdit.Document({ text: 'Hello' }).make();

if (Math.random() > 0.5) {
    doc.paragraphs.push(TextEdit.Paragraph({}, ' World'));
}

ObjC.import('stdio');
$.printf('%s %d %s', 'JavaScript', 4, 'Ever');

ObjC.import('Cocoa');
var msg = $.NSString.alloc.initWithUTF8String('Cocoa too!');
msg.writeToFileAtomically('/Users/john/test.txt', true);
```

October 21, 2014

Welcome to the first eLab bionode event

- Goals
- Introductions
- Agenda
- Sponsors
- Why bio? – why node?

Goals

- Learn more about node.js (beginning or advanced)
- Discover applications of node.js outside your domain
- Network with other JavaScript developers
- Establish a community of resources in the Tennessee Valley

Introductions

- Richard Williams (Director of Product Development)
- Ryan Carmichael (Director of Engineering)
- Jack Basiago (Senior Developer)
- Chris Case (Developer)
- Jason Carter (Developer)
- Rob Lurie (VP, CTO and Co-founder)

Agenda

Time	Description	Presenter
9:00 – 9:20	<i>Introduction to eLab bionode</i>	<i>Richard Williams (eLab)</i>
9:20 – 9:30	<i>Who is eLab?</i>	<i>Rob Lurie (eLab)</i>
9:30 – 10:00	<i>Getting Started</i>	<i>Richard Williams (eLab)</i>
10:00 – 12:00	<i>Workshop – Part 1</i>	<i>All</i>
12:00 – 1:30	<i>Lunch and Mingle</i>	<i>All</i>
1:30 – 3:30	<i>Workshop – Part 2</i>	<i>All</i>
3:30 – 4:00	<i>Angular Application on IOS using Ionic</i>	<i>Jack Basiago (eLab)</i>
4:00 – 4:30	<i>Node.js deployment to Heroku</i>	<i>Joe Kutner (Heroku)</i>
4:30 – 5:00	<i>Feedback, Prizes, and Drinks</i>	<i>All</i>

Sponsors

- eLab Solutions (eLab University)
- Heroku
- Jet Brains
- Strong Loop
- O'Reilly Books
- Manning Books
- Pragmatic Programmers

User Groups

- North Alabama Web Developers - <http://www.meetup.com/web-99/>
- NSHuntsville - <http://www.meetup.com/NSHuntsville/>
- Huntsville MongoDB User Group - <http://www.meetup.com/Huntsville-MongoDB-User-Group/>
- hsv.rb - <http://www.meetup.com/hsv-rb/>
- Huntsville Independent Game Developers - <http://www.meetup.com/huntsville-independent-game-developers/>
- NashJS - <http://www.meetup.com/nashjs/>

Why bio?
Why node?

Why bio?

- University of Illinois at Chicago indicates that **50,000 more health informatics workers** will be needed within the next 5-7 years. The university expects a **21% increase** in these jobs between 2010 and 2020.
- The US Department of Labor's Bureau of Labor Statistics projects a **22% growth in jobs for medical records and health information technicians** between 2012 and 2022.
- The global bioinformatics market, which reached the mark of around US\$ 3 Billion in 2010, will expand at a CAGR of around **25% during 2012-2015** as the declining cost of human genome sequencing and increasing public and private sector investment will give a significant boost to the industry.(Reportlinker.com)
- Increased awareness of the need to develop **rapid response to biological threats** using computer-designed drugs, modeling the spread of biological agents, and tracking contacts for quarantines

Why biotech?

Development Landscape

Why node?

Source: <http://www.modulecounts.com>

Include

- ☐ Bower (JS)
- ☐ Clojars (Clojure)
- ☒ CPAN
- ☐ CPAN (search)
- ☐ CRAN (R)
- ☒ GoDoc (Go)
- ☐ Hackage (Haskell)
- ☐ Hex.pm (Elixir/Erlang)
- ☒ Maven Central (Java)
- ☐ MELPA (Emacs)
- ☒ npm (node.js)
- ☒ nuget (.NET)
- ☒ Packagist (PHP)
- ☐ Pear (PHP)
- ☒ PyPI
- ☒ Rubygems.org

time period ☒ all time ☐ last year ☐ last 90 days ☐ last 30 days ☐ last 7 days

New users, issues, and repos

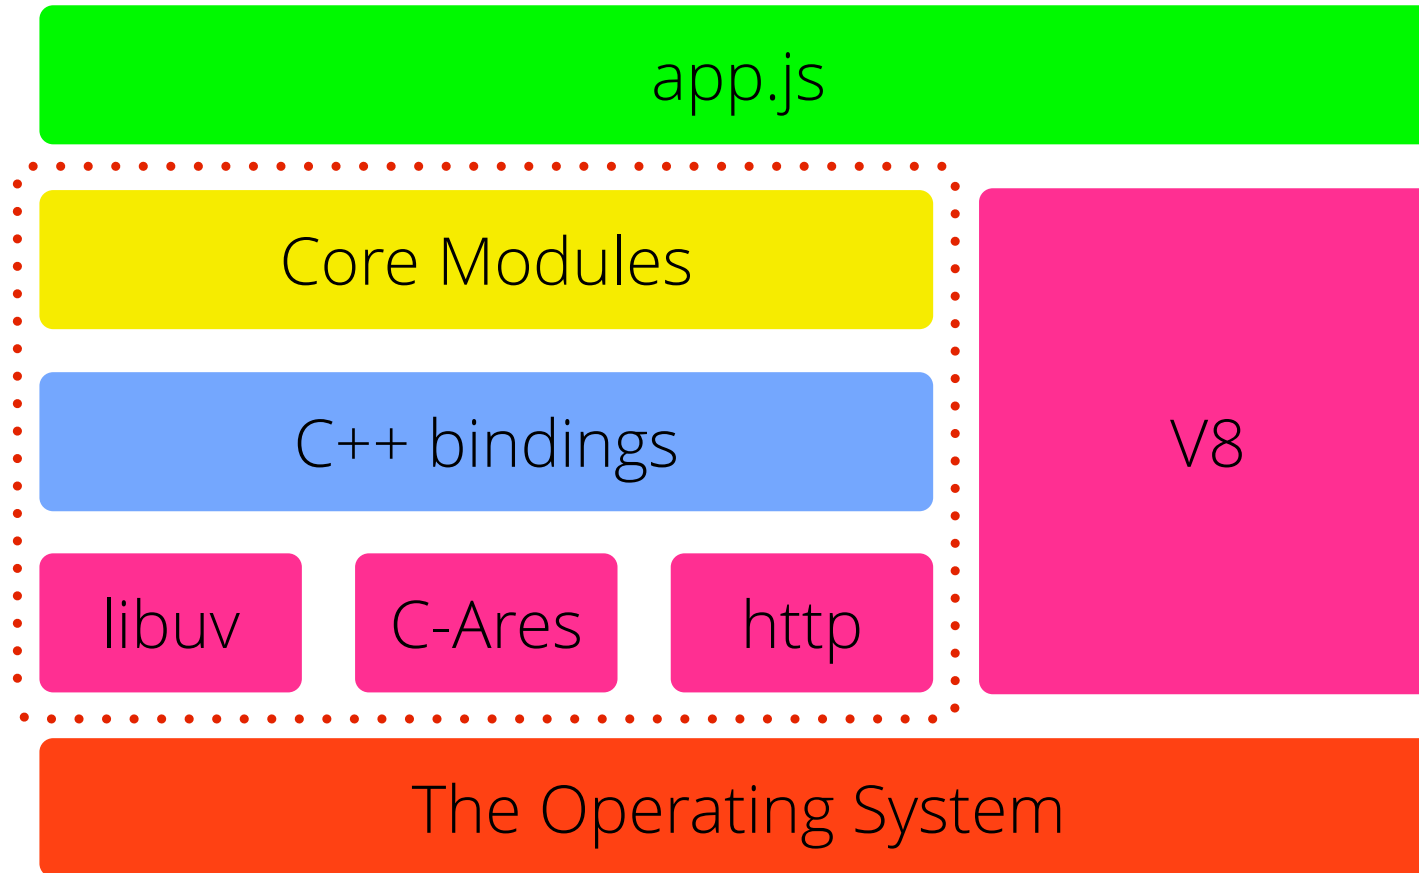

Why node?

- Full-stack development – Javascript all the way through using MEAN
- Fast – Google V8 Javascript engine compiles and executes Javascript as machine code
- Single-threaded – asynchronous event loop with callbacks - Reading /writing to network connections, filesystems, databases– very fast in Node
- npmjs.org – Modules, package management, and dependency management
- JSON – easy to create and read – ideal for NoSQL databases such as MongoDB
- Excellent stream support using events
- Available as PaaS (Azure, Modulus, Heroku)
- Enterprise support (Joyent, StrongLoop, New Relic, AppDynamics)

Node.js Architecture

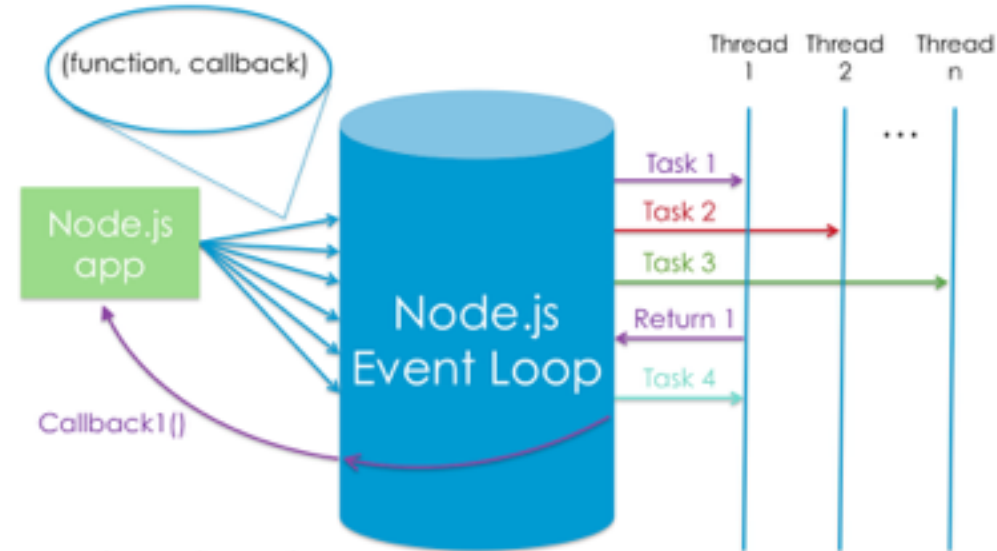

Node.js Asynchronous Event Loop

1 Node apps pass async tasks to the event loop, along with a callback

2 The event loop efficiently manages a thread pool and executes tasks efficiently...

3 ...and executes each callback as tasks complete

Areas of Biotechnology

- **Bioinformatics:** Research, development, or application of computational tools and approaches for expanding the use of biological, medical, behavioral or health data, including those to acquire, store, organize, archive, analyze, or visualize such data.
- **Computational Biology:** The development and application of data-analytical and theoretical methods, mathematical modeling and computational simulation techniques to the study of biological, behavioral, and social systems.
- **Health Informatics:** The resources, devices, and methods required to optimize the acquisition, storage, retrieval, and use of information in health and biomedicine

Javascript Biotechnology Highlights

Bioinformatics

- **Dat** - grant funded, open source project housed in the US Open Data Institute. While dat is a general purpose tool the focus is on open science use cases.
<http://dat-data.com/index.html>
- **BioJS** - open-source library of JavaScript components to visualise biological data
<http://biojs.net> (
 - Registry of components - <http://registry.biojs.net/client/#/>)
 - BioJS Playground - <http://edu.biojs.net/categories/playground/index.html>)

Computational Biology

- **Geppetto** – multi-algorithm, multi-scale simulation platform engineered to support the simulation of complex biological systems and their surrounding environment
<http://www.geppetto.org>

Health Informatics

- **Bluebutton.js** – designed to simplify working with health data, so you as a developer can help patients get access to their data and get it to whomever is caring for them.
<http://www.bluebuttonjs.com>

Javascript Highlights

- **MongoDB** - open-source document NoSQL database – written in C++ but stores JSON style document – excellent interfaces for node.js
- **Express.js** - Minimal and flexible Node.js web application framework that provides a robust set of features for web and mobile applications.
<http://expressjs.com>
- **Angular.js** – Single-page Application framework from Google
<https://angularjs.org>
- **D3.js** – Data-Driven Documents visualization library (used by biogps.org)
<http://d3js.org>

The Future of Javascript

- **ECMAScript 6**– Major changes ahead in Javascript including new class syntax, promises, modules, inheritance, arrow functions, and more!
<https://github.com/nzakas/understandings6>
- **Tessel** – a microcontroller that runs JavaScript, is Node-compatible and has Wifi
<https://tessel.io>
- **Angular v2.0** – ECMAScript 6 compatible, more mobile focus, profiling, logging service, increase performance
<http://angularjs.blogspot.com/2014/03/angular-20.html>
- **Language Compilers** – other languages compiled to Javascript, CoffeeScript, ClojureScript, TypeScript, Opal (Ruby), Scala.js, etc.
<https://github.com/jashkenas/coffeescript/wiki/list-of-languages-that-compile-to-js>
